## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1 – 9 are allowed.

The following is an examiner's statement of reasons for allowance:

Oppelt (Figs. 4-6) shows a negative impedance circuit comprising amplifying means (26) with positive and negative feedback and dividing means at the output of the amplifier but does not teach or suggest subtracting means and where the divided ratio provides negative resistance between the input of the subtracting means and ground (claim 1); nor would it be obvious to combine the prior art, thus the claims are allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Maejima et al. – shows an amplitude adjustment device.

Oppelt – shows a frequency compensating amplifier.

Wong et al. – shows a negative resistance compensated buffer.
